

90-day | Non Human Identity Governance Sprint

The Challenge

Non-Human Identities (NHIs) are growing explosively. Organizations are struggling with limited visibility and highly unclear ownership. The urgency to act is higher than ever to prevent breach of vital systems.

The Approach

Executed by our Senior Consultants, this 90-day sprint is designed to bring abstract risks into concrete control. The scope is a complete governance framework and operational dashboard for 1 identity type (e.g., AI Agents).

The sprint is divided into three structured phases to ensure every identity is visible, owned, and securely maintained.

Phase 1

Month 1 Discovery & Ownership

We map NHIs across your environment to identify the biggest risks. Identities are classified and every unattended identity is assigned a dedicated human owner to ensure clear accountability and governance.

Phase 2

Month 2 Controls & The "Kill-Switch"

We implement policy-as-code and delegation guardrails. Crucially, we investigate the exact business implications of disabling an NHI and safely test a "kill-switch" so you can act immediately if a signal turns red.

Phase 3

Month 3 Visibility & Maintenance

We make the invisible visible. We feed all telemetry into a central dashboard for continuous monitoring and maintenance, concluding with a board-ready readout to prove your organization is in control.

Next:
Scale to other Non-Human Identity types

Contact us and raise it in your organization and you have made the 1st step towards control.
